Key Information Memorandum

	<p>a micro-cap stock, the fund is fixing the universe using the threshold of stocks with a market cap equal to or lower than that of the 301st stock by market cap on the NSE. These stocks are generally more volatile than the large-cap or mid-cap stock and as such potentially can offer higher returns, too.</p> <ol style="list-style-type: none"> We define Micro cap as those stocks whose market capitalisation is equal to or lower than the 301st stock by market cap (after sorting the stocks in descending order of market cap) on the National Stock Exchange of India. We believe our universe of investable stocks is between 301 and 700 – i.e. a total of 400 stocks. The aggregate market capitalization of these 400 stocks is Rs 6.50 lakh crores and their average trading volumes (10 day trading average, source, Bloomberg) is 10,81,000 with the largest trading volume of 5 crore shares and smallest trading volume of 1275. Leaving out the bottom 100 least liquid stocks the trading volume of the 300th stock in the universe of 400 stocks is 29,000. As our portfolio is most likely to be confined towards the larger end of the Universe we feel that there will be adequate liquidity for the portfolio. Our portfolio will consist of around 50 stocks and one of the criteria for selecting a stock will be liquidity (i.e. adequate trading volumes). We will ensure that only stocks with adequate trading volume will be purchased. (Adequate trading volume will be defined as trading volume sufficient to exit the stock in its entirety within 15 days based on the 10 day trading volume prior to the date of purchase). We have an in-house risk management team who will monitor the trading volumes of each of the stocks on a daily basis and will red flag any potential cause for concern if the trading volumes were to fall for any reason. Once a stock has been red flagged we will have an Investment committee meeting comprising of the Fund Manager, the CEO, the MD and Head of Operations and the committee will decide if we need to exit the stock. We will also ensure on an ongoing basis that the entire portfolio can be liquidated within 30 days assuming 50% of the average trading volume of the stocks. As we near the expiry of the lock-in period for the Fund we will gradually liquidate the least liquid of these stocks first and move them to money market instruments thereby ensuring adequate liquidity for redemptions. We will ensure that the initial redemptions post expiry of the 3 year lock in is made substantially out of the lesser liquid stocks in the portfolio thereby ensuring that the residual investments in the Fund have those stocks with the highest liquidity". In the event of deviations, the fund manager will carry out rebalancing within 30 days. 																											
Risk Profile	Mutual Fund Units involve investment risks including the possible loss of principal. Please read the Statement of Additional Information and Scheme Information Document carefully for details on risk factors before investment.																											
Risk Mitigation	<p>The risk of concentration in the portfolio shall be mitigated by having internal fund management guidelines that provide for single-stock – subject to the SEBI prescribed limit of 10% - and sector exposure limits. The adherence shall be monitored by the Risk Management team that reports to the Managing Director of Sundaram Asset Management. Deviation if any, from the limit will have to approved by the Managing Director subject to rustication by the fund manager and will also, if required, be brought to the notice of the Risk Management Committee at the board level.</p> <p>An independent risk management team is in place to oversee and monitor portfolio risk on a day-to-day basis. Internal risk control guidelines are in place and the portfolio contours are tracked on a daily basis to ensure adherence. Any deviation is brought to the notice of the Managing Director and the fund manager for corrective action. Follow up actions are made to ensure that the deviation is corrected within the time period prescribed in internal risk control guidelines. Adherence to limits from SEBI Regulations as well as stipulations in the Scheme Information Document is monitored by the compliance team.</p> <p>Committee monitoring Risk Management: The Board of Sundaram Asset Management has constituted a Committee comprising Managing Director & Two Independent Directors to monitor risk management. <p>General Risk Factors</p>	<p>Mutual Fund Investments are subject to market risks. Please read the Scheme Information Document carefully before investing. Copy of the Scheme Information Document, key information memorandum and application form may be obtained from the offices / investor service centres of Sundaram Asset Management, its distributors and online at www.sundarammutual.com. All mutual funds and securities investments are subject to market risks, and there can be no assurance or guarantee that fund's objectives will be achieved. NAV may go up or down, depending on the factors and forces affecting the securities market. Main types are market risk, liquidity risk, credit risk and systemic risks. At times, liquidity of investments may be impaired. There is uncertainty of dividend distribution and risk of capital loss. Past performance of the Sponsor/Asset Management Company/Fund does not indicate the future performance. Investors in the Scheme are not being offered any guaranteed or indicated returns. Sundaram Select Micro Cap-Series XI is only the name of the scheme and it does not in any manner indicate either quality of the scheme, its future prospects or returns.</p> <p>Risk Factors - Equity Markets: Stock Market Volatility, Equity Price Risk, Dependency Risk, Temporary Investment Risk and Non-Diversification Risk and Concentration Risk, to name a few.</p> <p>Risks from Derivative Exposures: Counter Party Risk, Market risk, Illiquidity risk and Basis Risk, to name a few.</p> <p>Risks from Debt Exposures: Credit Risk, Interest Rate Risk, Price Risk, Market Risk, Liquidity Risk, Investment Pattern Risk, Duration Risk and Non-Diversification Risk, to name a few.</p>
<p>Scheme-Specific Risk Factors</p>	<ul style="list-style-type: none"> • Micro-cap stocks are generally illiquid in terms of trading volumes; investors should assume that illiquidity risks are higher in this Scheme than in a normally diversified fund. • This may result in higher impact costs. Impact costs are those costs that are incurred for acquiring and disposing off stocks. These are different from brokerage and custodian charges. The Scheme does not guarantee that impact cost will be minimized or eliminated. • The Scheme may invest up to 10 per cent of net assets in unlisted equity and equity-related instruments, which could affect the liquidity of the Scheme. • While micro cap companies may offer substantial opportunities for capital appreciation, they also at least commensurate risks. Historically, these companies have been more volatile in price than larger company securities, especially over the short term. Among the reasons for the greater price volatility are the less certain growth prospects of smaller companies, the lower degree of liquidity in the markets for such securities, lack of transparency and the greater sensitivity of smaller companies to changing economic conditions. • In addition, micro-cap companies may lack depth of management, be unable to generate funds necessary for growth or development, or be developing or marketing new products or services for which markets are not yet established and may never become established. They could also suffer from disadvantages such as outdated technology, lack of bargaining power with suppliers, low entry barriers and inadequate management depth. • Transparency/liquidity levels may not be on par with established, large companies. Corporate governance may be an issue with some companies. They may not be resilient enough to withstand shocks of business/economic cycles. • There are also risks specific to closed-end schemes and listed securities. • The Units will not be redeemed prior to maturity and liquidity will be only by selling the units in demat form on the National Stock Exchange. Trading on the Stock Exchanges in which the Units of the Scheme are listed may be closed/ suspended by the Stock Exchange authorities under special circumstances (due to market volatility/circuit filter rules/breakdown of communication/network systems/SEBI Directive, to name a few). • Though the Units will be listed, there can be no assurance that there will be an active secondary market in the Units of the Scheme. • The Scheme may use derivative instruments for the purpose of hedging and portfolio balancing, as permitted under the Regulations. Usage of derivatives will expose the scheme to certain risks inherent to such derivatives. Change in Government policy in general and changes in tax benefits applicable to mutual funds may impact the returns to Investors.
