INVESTMENT STRATEGY:

The Scheme endeavors to protect capital by investing a portion of the portfolio in highest rated debt securities & money market instruments and also to provide capital appreciation by investing the balance in equity and equity related securities. The allocation to equity and equity related securities would depend on interest rates prevailing at the time of deployment of funds in debt securities and the time horizon of each plan. It would typically be equal to the interest amount that can be earned from the debt securities for the tenure of the investment.

Fixed Income Securities:

The Scheme will invest in a basket of debt and money market securities maturing on or before maturity of the fund. The fund will invest in securities with a view to hold them till the maturity of the fund. To that effect the fund will follow a buy and hold strategy to investment. The AMC aims to identify securities, which offer superior levels of yield at lower levels of risks. With the aim of controlling risks, rigorous in-depth credit evaluation of the securities proposed to be invested in will be carried out by the investment team of the AMC. The credit evaluation includes a study of the operating environment of the company, the past track record as well as the future prospects of the issuer, the short as well as longer-term financial health of the issuer. The AMC will also be guided by the ratings of Rating Agencies registered with SEBI.

In addition, the investment team of the AMC will study the macro economic conditions, including the political, economic environment and factors affecting liquidity and interest rates. The AMC would use this analysis to attempt to predict the likely direction of interest rates and position the portfolio appropriately to take advantage of the same.

- Exposure to the securities rated by CARE at all times shall not exceed 20% of the Assets under Management (AUM) of the Scheme. The restriction shall continue to apply even in cases where the security is rated by CARE and any other Agency. However, this limit will not apply to securities issued by a Public Sector Undertaking (PSU). Any change due to change in the market conditions resulting in an increase in exposure beyond the specified limit of 20%, the exposure will be brought down within a period of 30 days.
- The yield on debt securities at the time of purchase shall not be more than 100 bps to the benchmark yield as stipulated under relevant CRISIL or ICRA or FIMMDA Bond Matrix as applicable to AAA instruments. However, this shall not apply for purchase of securities issued by Government of India and Public Sector Undertakings. The restriction shall be applicable at the time of investment and not thereafter. Further, the expenses of subscribing the matrix from CRISIL or ICRA will be borne by the AMC.
- The fixed income component of the Scheme shall be invested in Central government securities or debt securities issued by corporate rated at AAA or equivalent rating
- The Scheme is 'oriented towards protection of capital' and not with 'guaranteed returns'. Further, the orientation towards protection of capital originates from the portfolio structure of the Scheme and not from any bank guarantee, insurance cover, etc.
- The Scheme shall endeavour to ensure capital protection by investing in debt the allocation not below the CARE indicative allocation at the time of launch. Capital protection will be provided solely through the fixed income part of the portfolio and the same shall be invested in securities that mature to capital value at the end of the Scheme.
- The debt component of the portfolio will always have the highest investment rate grading (AAA rating or equivalent from a rating agency).
- Whenever asset allocation is altered for defensive considerations, the AMC shall endeavour to ensure that the capital remains protected on maturity and also that the rating of the Scheme is not adversely affected.
- Fund manager may alter the asset allocation during subsequent deployment of funds provided such deployment is generated out of appreciation in value of existing investments. While making such asset

Equities:

For the equity portion of the corpus, the AMC intends to invest in stocks, which will be bought, keeping in mind the time horizon of the plan. Stock specific risk will be minimized by investing only in those companies that have been thoroughly analyzed by the Fund Management team at the AMC. The AMC will also monitor and control maximum exposure to any one stock or one sector.

The Scheme may also use various derivatives and hedging products from time to time, as would be available and permitted by SEBI, for hedging and portfolio rebalancing purpose or to improve performance and manage risk efficiently. The fund may take exposure to equity market via futures or options as it allows efficient participation in equity market movements. At the start date of the scheme the futures or options may be bought and may be held until their expiry date. The expiry date would fall within the maturity date of the scheme.

Credit Evaluation Policy for investment in debt securities:

The AMC aims to identify securities, which offer superior levels of yield at lower levels of risks so the investment process is firmly research oriented. It comprises of qualitative as well as quantitative measures. Qualitative factors like management track record, group companies, resource-raising ability, extent of availability of banking lines, internal control systems, etc are evaluated in addition to the business model and industry within which the issuer operates as regards industry/model-specific risks working capital requirements, cash generation, seasonality, regulatory environment, competition, bargaining power, etc. Quantitative factors like debt to equity ratio, Profit and loss statement analysis, balance sheet analysis.

Macroeconomic call is taken on interest rate direction by careful analysis of various influencing factors like Inflation, Money supply, Private sector borrowing, Government borrowing, Currency market movement, Central Bank policy, Local fiscal and monetary policy, Global interest rate scenario and Market sentiment. Interest rate direction call is supplemented by technical analysis of market and short term influencing factors like trader position, auction/issuance of securities, release of economic numbers, offshore market position, etc. Interest Rate direction call and anticipation of yield curve movement forms the basis of portfolio positioning in duration and spread terms.

Credit research is done on a regular basis for corporate having high investment grade rating. Credit research includes internal analysis of rating rationale, and financial statements (annual reports and quarterly earnings statements) of the issuer, for the last 1-3 years evaluating amongst other metrics, relevant ratios of profitability, capital adequacy, gearing, turnover and other inputs from external agencies. On an ongoing basis, the credit analyst keeps track of credit profile of the issuer, possible credit risks reflected in change in outlook of rating agencies, external developments affecting the issuer etc. Internal credit call is a pre-requisite for all investments since the investment universe is primarily high-grade credit instruments. Credit research is also used to minimize credit migration risk and for generating relative value trade ideas. Stable to higher rating on maturity vis-à-vis issuance is the guiding factor for investment decisions from credit point of view.

RISK PROFILE OF THE SCHEME:

Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme Specific Risk Factors summarised below.

Scheme Specific Risk Factors and Risk Management Strategies:

- The Scheme offered is "oriented towards protection of capital" and "not with guaranteed returns". The scheme does not guarantee any returns. The orientation towards protection of the capital originates from the portfolio structure of the Scheme and not from any bank guarantee, insurance cover etc. There is no assurance that the structure would provide the necessary protection of capital
- The ability of the portfolio to meet capital protection on maturity to the investors can be impacted in certain circumstances by changes in government policies, interest rate movements in the market, credit defaults by bonds, expenses, reinvestment risk and risk associated with trading volumes, liquidity and settlement systems in equity and debt markets. Accordingly, investors may lose part or all of their investment (including original amount invested) in the Scheme. No guarantee or assurance, express or implied, is given that investors will receive the capital protected value at maturity or any other returns.
- The rating provided by CARE, only assesses the degree of certainty for achieving the objective of the Scheme i.e. capital protection and does not denote any opinion on the stability of the NAV of the Scheme. The rating should, however, not be construed as an indication of expected returns,

prospective performance of the mutual fund scheme, NAV or of volatility in its returns. The rating would be reviewed on a quarterly basis by CARE.

- The initial investment mix of the scheme is based upon assumptions on collections, pre-determined initial and running expenses and yield on the securities in the fixed income portfolio.
- CARE reserves the right to suspend, withdraw or revise the ratings assigned to the portfolio structure of this scheme at any time, on the basis of any new information or unavailability of information or any other circumstances, which the Rating Agency believe may have impact on the above rating.
- The rating, as aforesaid, however, should not be treated as a recommendation to buy, sell or hold the units issued by ICICI Prudential Mutual Fund under the Scheme. The rating is restricted to the portfolio structure of this Scheme only. CARE does not assume any responsibility on its part, for any liability that may arise consequent to the non-compliance of any guidelines or directives issued by SEBI or any other mutual fund regulatory body.
- The rating is based on current information furnished to the Rating Agency by the issuer or obtained by the rating Agency from sources it considers reliable. The rating Agency does not, however, guarantee the accuracy, adequacy or completeness of any information and are not responsible for any errors or omissions or for the results obtained from the use of such information.
- The Asset Management Company shall not repurchase units of the Scheme before end of the maturity period. However, the Scheme may be listed on one or more Stock Exchange(s) in India at the discretion of the Trustees.
- Investors in the Scheme are not being offered any guaranteed / assured returns.
- The Trustees, AMC, Fund, their directors or their employees shall not be liable for any tax consequences that may arise in the event that the Scheme is wound up for the reasons and in the manner provided under the Scheme Information Document.
- Redemption by the Unit Holder due to change in the fundamental attributes of the Scheme or due to any other reasons may entail tax consequences. The Trustees, AMC, Fund their directors or their employees shall not be liable for any tax consequences that may arise.

Fixed Income Securities:

Interest Rate Risk: As with all debt securities, changes in interest rates may affect the Plan's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of long-term securities generally fluctuate more in response to interest rate changes than do short-term securities. Indian debt markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby to possible movements in the NAV.

Liquidity or Marketability Risk: This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is today characteristic of the Indian fixed income market.

Credit Risk: Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security). Because of this risk corporate debentures are sold at a higher yield above those offered on Government Securities which are sovereign obligations and free of credit risk. Normally, the value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default. The greater the credit risk, the greater the yield required for someone to be compensated for the increased risk.

Reinvestment Risk: This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.

Risks associated with Equities and Derivatives investments:

Investors may note that AMC/Fund Manager's investment decisions may not be always profitable. The Scheme proposes to invest in equity and equity related securities. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of these investments. Different segments of the Indian

financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. By the same rationale, the inability to sell securities held in the Scheme's portfolio due to the absence of a well developed and liquid secondary market for securities would result, at times, in potential losses to the Scheme, in case of a subsequent decline in the value of securities held in the Scheme's portfolio.

The scheme is also vulnerable to movements in the prices of securities invested by the scheme, which again could have a material bearing on the overall returns from the scheme. These stocks, at times, may be relatively less liquid as compared to growth stocks.

The liquidity of the Scheme's investments is inherently restricted by trading volumes in the securities in which it invests.

The value of the Scheme's investments, may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or any other appropriate authority policies and other political and economic developments which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets. Consequently, the NAV of the Units of the Scheme may fluctuate and can go up or down.

Investment decisions made by the AMC may not always be profitable, as actual market movements may be at variance with anticipated trends.

The performance of the scheme will be affected in case of unforeseen circumstances like political crisis, natural calamities, and changes in currency exchange rates or interest rates.

Fund manager tries to generate returns based on certain past statistical trend. The performance of the scheme may get affected if there is a change in the said trend.

There can be no assurance that such historical trends will continue.

In case of abnormal circumstances it will be difficult to complete the square off transaction due to liquidity being poor in stock futures/spot market. However fund will aim at taking exposure only into liquid stocks where there will be minimal risk to square off the transaction.

As and when the Scheme trades in the derivatives market there are risk factors and issues concerning the use of derivatives that Investors should understand. Derivative products are specialized instruments that require investment techniques and risk analyses different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. Other risks in using derivatives include the risk of mis pricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.

Thus, derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have a large impact on their value.

Derivatives products are leveraged instruments and provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of the fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify to execute such strategies.

The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

The specific risk factors arising out of a derivative strategy used by the Fund Manager may be as below:

- Lack of opportunity available in the market.
- The risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.

Risks associated with Investing in Securitised Debt

The Scheme will not invest in securitised debt.

Risks associated with Short Selling and Securities Lending

The Scheme will not do 'Short Selling' and 'Securities Lending' activity.

Risk associated with close ended Schemes:

A close ended Scheme endeavors to achieve the desired returns only at the scheduled maturity of the Scheme. Investors who wish to exit/redeem before the scheduled maturity date may do so through the stock exchange mode, if they have opted to hold Units in a demat form, by mentioning their demat details on the NFO application form. For the units listed on the exchange, it is possible that the market price at which the units are traded may be at a discount to the NAV of such Units. Hence, Unit Holders who sell their Units in a Scheme prior to maturity may not get the desired returns.

Although the securities in the portfolio will have high market liquidity, there is a possibility that market liquidity could get impacted on account of company/sector/general market related events and there could be a price impact at maturity while liquidating the portfolio.

Risks attached with investments in ADRs/GDRs/ overseas securities:

The investment in ADRs/GDRs/overseas securities offer new investment and portfolio diversification opportunities into multi-market and multi-currency products. However, such investments also entail additional risks. Such investment opportunities may be pursued by the AMC provided they are considered appropriate in terms of the overall investment objectives of the scheme. Since the Scheme would invest only partially in ADRs/GDRs/overseas securities, there may not be readily available and widely accepted benchmarks to measure performance of the Scheme. To manage risks associated with foreign currency and interest rate exposure, the Fund may use derivatives for efficient portfolio management including hedging and in accordance with conditions as may be stipulated by SEBI/RBI from time to time.

To the extent that the assets of the Scheme will be invested in securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by the changes in the value of certain foreign currencies relative to the Indian Rupee. The repatriation of capital also may be hampered by changes in regulations concerning exchange controls or political circumstances as well as the application to it of the other restrictions on investment.

Offshore investments will be made subject to any/all approvals, conditions thereof as may be stipulated by SEBI/RBI and provided such investments do not result in expenses to the Fund in excess of the ceiling on expenses prescribed by and consistent with costs and expenses attendant to international investing. The Fund may, where necessary, appoint other intermediaries of repute as advisors, custodian/sub-custodians etc. for managing and administering such investments. The appointment of such intermediaries shall be in accordance with the applicable requirements of SEBI and within the permissible ceilings of expenses. The fees and expenses would illustratively include, besides the investment management fees, custody fees and costs, fees of appointed advisors and sub-managers, transaction costs, and overseas regulatory costs.

Risk management strategies: The Fund by utilizing a holistic risk management strategy will endeavor to manage risks associated with investing in debt markets. The risk control process involves identifying & measuring the risk through various risk measurement tools.

The Fund has identified following risks of investing in debt and other securities and designed risk management strategies, which are embedded in the investment process to manage such risks.

Risks associated with Debt investment	
<p>Market Risk As with all debt securities, changes in interest rates may affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of long-term securities generally fluctuate more in response to interest rate changes than do short-term securities. Indian debt markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby to possible movements in the NAV.</p>	<p>The fund will invest in a basket of debt and money market securities maturing on or before maturity of the fund with a view to hold them till the maturity of the fund. While the interim NAV will fluctuate in response to changes in interest rates, the final NAV will be more stable. To that extent the interest rate risk will be mitigated at the maturity of the scheme.</p>
<p>Liquidity or Marketability Risk This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer.</p>	<p>The Scheme may invest in government securities, corporate bonds and money market instruments. While the liquidity risk for government securities, money market instruments and short maturity corporate bonds may be low, it may be high in case of medium to long maturity corporate bonds. Liquidity risk is today characteristic of the Indian fixed income market. The fund will however, endeavor to minimise liquidity risk by investing in securities having a liquid market.</p>
<p>Credit Risk Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security). Because of this risk corporate debentures are sold at a higher yield above those offered on Government Securities which are sovereign obligations and free of credit risk. Normally, the value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default. The greater the credit risk, the greater the yield required for someone to be compensated for the increased risk.</p>	<p>Management analysis will be used for identifying company specific risks. In order to assess financial risk a detailed assessment of the issuer's financial statements will be undertaken to review its ability to undergo stress on cash flows and asset quality. A detailed evaluation of accounting policies, off-balance sheet exposures, notes, auditors' comments and disclosure standards will also be made to assess the overall financial risk of the potential borrower.</p>
<p>Reinvestment Risk This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.</p>	<p>Reinvestment risks will be limited to the extent of coupons received on debt instruments, which will be a very small portion of the portfolio value.</p>
<p>Derivatives Risk As and when the Scheme trades in the derivatives market there are risk factors and issues concerning the use of derivatives that Investors should understand. Derivative products are specialized instruments that require investment techniques and risk analyses different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is the possibility that a loss may be sustained by the portfolio as a result of the failure</p>	<p>Interest Rate Swaps will be done with approved counter parties under pre approved ISDA agreements. Mark to Market of swaps, netting off of cash flow and default provision clauses will be provided as per international best practice on a reciprocal basis. Interest rate swaps and other derivative instruments will be used as per local (RBI and SEBI) regulatory guidelines.</p>

of another party (usually referred to as the "counter party") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mis-pricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.	
Risks associated with Equity investment	
Market Risk The scheme is vulnerable to movements in the prices of securities invested by the scheme, which could have a material bearing on the overall returns from the scheme. The value of the Scheme's investments, may be affected generally by factors affecting securities markets, such as price and volume, volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or any other appropriate authority policies and other political and economic developments which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets.	Market risk is a risk which is inherent to an equity scheme. The scheme may use derivatives to limit this risk.
Liquidity risk The liquidity of the Scheme's investments is inherently restricted by trading volumes in the securities in which it invests.	The fund will try to maintain a proper asset-liability match to ensure redemption / Maturity payments are made on time and not affected by liquidity of the underlying stocks.
Derivatives Risk As and when the Scheme trades in the derivatives market there are risk factors and issues concerning the use of derivatives that Investors should understand. Derivative products are specialized instruments that require investment techniques and risk analyses different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is the possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the "counter party") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mis-pricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.	Derivatives will be used for the purpose of hedging/ portfolio balancing purposes or to improve performance and manage risk efficiently. Derivatives will be used in the form of Index Options, Index Futures, Stock Options and Stock Futures and other instruments as may be permitted by SEBI. All derivatives trade will be done only on the exchange with guaranteed settlement. No OTC contracts will be entered into.
Currency Risk The Scheme may invest in foreign securities as permitted by the concerned regulatory authorities in India. Since the assets may be invested in securities denominated in foreign currency, the INR equivalent of the net assets, distributions and income may be adversely affected by changes / fluctuations in the value of the foreign currencies relative to the INR.	The Scheme may employ various measures (as permitted by SEBI/RBI) including but not restricted to currency hedging (such as currency options and forward currency exchange contracts, currency futures, written call options and purchased put options on currencies and currency swaps), to manage foreign exchange movements arising out of investment in foreign securities. All currency derivatives trade, if any will be done only through the stock exchange platform.
